SAFEMARK™ SYSTEMS

SafePod

DEPENDABLE SECURITY

Flexible Configurations

Regardless of your facility size, SafePod is the perfect complement to increase associate satisfaction and decrease theft complaints. Our lockers are available in various sizes & configurations including 1, 2 & 5 tiers.

Multiple User Options

SafePod's intuitive software is designed to accommodate both single/shift users and assigned users.

Lockers in the single/shift mode show availability with a green, illuminating handle. The user simply places their belongings in the locker and creates a unique four-digit PIN to lock & unlock the door. Once unlocked, the locker automatically resets for the next user.

Assigned lockers are ideal for associates requiring a more permanent location to secure personal items. Upon assignment, each user creates a four-digit PIN to initialize and access their locker. The door automatically locks when closed without the need to reenter the PIN. This PIN remains the same until changed by the user.
