DEPENDABLE SECURITY

Hotels depend on reliable, emergency access to their safes and Safemark's industry-leading override systems deliver confidence. Safemark will undoubtedly meet your security needs while maintaining the design integrity of your guest room.

High Security Key Override

OPTIONAL HIGH SECURITY KEY OVERRIDE SYSTEM

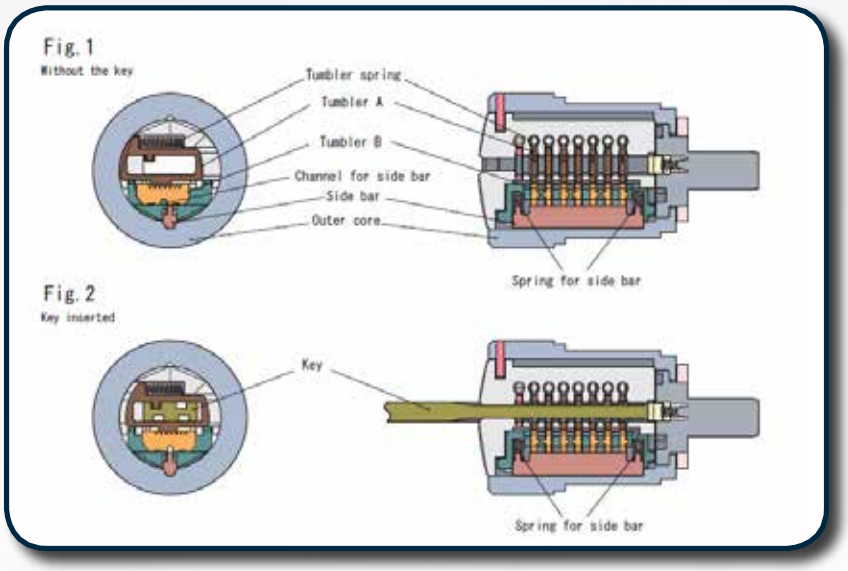
Concealed behind a plate, the cylinders are customized to each property with a unique pinning code. Unlike skeleton keys, the high security keys cannot be easily copied and additional keys are only available from the manufacturer with proper authority. The lock is virtually pick proof and cannot be bumped.

PATENTED LS7 FEATURES

> Superior operational performance and anti-picking due to the use of sidebar technology.
> Industry exclusive key codes can be reprogramed on the fly with a simple turn of the change key. A new user key then reprograms the lock.
> Easy operation of keys with almost no binding on insertion and removal,thus reducing key wear and extending product life.
> Both Keys and Locks can be serial stamped for simple tracking and auditing.
> When changing the key code on the lock, the tail and cam remain in the locked position, thus maintaining security and improving efficiency.
> Locks are shipped with an "off the floor" code for lockable functionality during installation and are ready for immediate code change.

LS7 CYLINDER FROM MIWA

High security cam lock with special key change mechanism has superior operational performance and anti-picking due to sidebar technology. A cost effective approach, cylinders can be reprogrammed up to 10,000 times.



MECHANICAL SPECIFICATIONS

CYLINDER

> Disk tumbler method with side bar (7 lines tumbler, 4 different increment)
> Approximately 10,000 practical key combinations

KEY

> Patented key ward prevents unauthorized key duplication
> User friendly reversible key for easy insertion
> Keys are made of nickel-silver for increased durability

DEPENDABLE SECURITY

SAFEMARK™ SYSTEMS

EASY 4 STEP KEY CHANGE PROCESS

1. Insert the appropriate change key then turn 180° clockwise
2. Pull the change key at neutral position
3. Insert the new user key, then turn 180° clockwise
4. Pull the new user key to complete the change

240 EVENT AUDIT TRAIL

Reducing fraudulent liability claims becomes even easier, saving the hotel both time and money with the 240 Event Audit Trail. If a guest claims a theft, the report will identify the last 240 opening, with openings by the MIWA key identified as "OPENED BY KEY."

Audit retains the following:

> Time and Date of Each Safe Locking and Opening
> Full Identity (Full Name) of Authorized Staff Members Who Have Opened a Locked Safe
> Time and Date of Countdowns
> Time and Date of MIWA Key Openings
> Time and Date of Battery Replacement
